Leadership For Positive Change

GLOBAL INSTITUTE FOR WATER, ENVIRONMENT AND HEALTH

A Strategic plan 2015 – 2019

Our Vision

To empower the most vulnerable societies to be able to live in a healthy environment with sustainable quantities of high-quality water.

Our Mission

To provide societies, individuals and institutions with educational, research, technical, financial, and scientific support to realise the effective and sustainable use and management of water.

Our Values :

Professionalism - we aim for quality in what we do, seek ways to improve on our performance and are guided by evidence-based scientific research.

Excellence - we strive to be better than good, and add value through innovative initiatives and activities.

Diplomacy - we strive to find win-win solutions and promote peace through water diplomacy, particularly in fragile states and water scarce regions.

Integrity - we ensure transparency and accountability in the manner in which our projects and programmes are developed and managed.

International - we cooperate across borders, sharing knowledge and technology transfer with colleagues and partners from around the world.

Creativity & innovation - we encourage a creative mindset in our organizational culture and we foster innovative ideas that will lead to better results.

The Strategic Plan

Amid the significant increases in the threats to water sustainability and environmental safety, and the water crisis being identified as the top risk in terms of impact by in the World Economic Forum's Global Risk Report 2015 GIWEH has developed this five-year strategic plan.

We have identified seven strategic goals to respond more effectively to these threats, and to ensure that the Institute continues to play a leading role in the global effort on water use and management, and its effects on the environment and health.

1

Addressing the needs of different countries, especially unstable and post-conflict states

2

Increasing focus on water governance, good practices and stakeholder engagement

3

Involving more youth and women in science and technology

4

Addressing the needs of different countries, especially unstable and post-conflict states

5

Conducting research and developing training and educational materials

6

Adopting clear and applicable monitoring indicators on high quality solutions for water security, particularly in water scarce regions

7

Strengthening our involvement in the development process, especially with regard to water in the post-2015 agenda
